

# Capstone Project-2 Bike Sharing Demand Prediction

Member Sourabh Pramanik

# **Contents**

- 1. Problem Statement
- 2. Data Summary
- 3. Dependent Variable
- 4. Independent Variable
- 5. Checking Missing values and Outliers
- 6. EDA and Visualization
- 7. Test and Train split
- 8. Applying Machine Learning models and Hypertuning
- 9. Performance of the model after hypertuning
- 10. Comparison between models
- 11. Final Summary of Conclusion
- 12. Q&A

#### **Problem Statement**

Here in this project we have one dataset-

#### SeoulBikeData

Currently the rental bikes are introduced in many urban cities for enhancement of mobility comfort. It is important to make the rental bikes available to public at right time as it lessen the waiting time.

In this project we will try to understand the Bike demand with respect to different timings of the day, months, seasons.

#### **Data Summary**

We will complete this project by using following steps-

- After reading the data we will perform Exploratory Data analysis.
- We will check the Null values and Outliers present in our Dataset.
- We will do some statistical analysis of the data.
- We will check the distribution of all the numerical columns and correlation between the variables.
- After then we will apply different Machine Learning models and will check the performance of the Models by using some performance metrics.

#### **Data Summary**

Outcomes of this Project -

- Factors which affect the Bike demand.
- Selection of appropriate model to predict the demand.
- Average count of bikes needed w.r.t every 'Hour', 'Month', 'Seasons'.

### **Independent Variables**

#### Some important Independent variables -

Hours of the day, Temperature, Humidity, Wind Speed, Rainfall, Snowfall, Holiday, Functional Day.

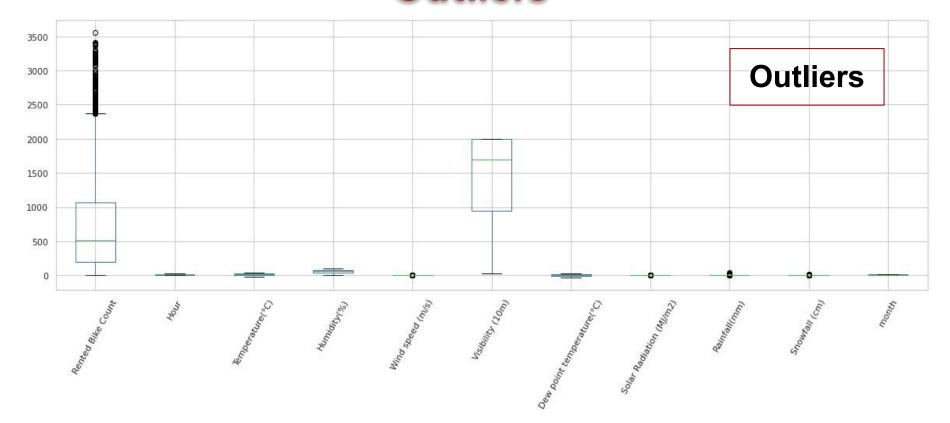

## **Dependent Variables**

Dependent variable-

Rented Bike Count

# Checking Missing values and Outliers

#### **Statistical Distribution**

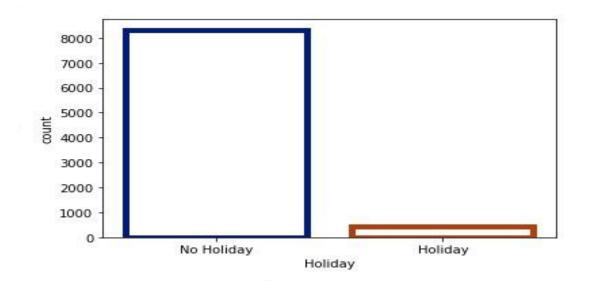

df\_copy.describe()

4

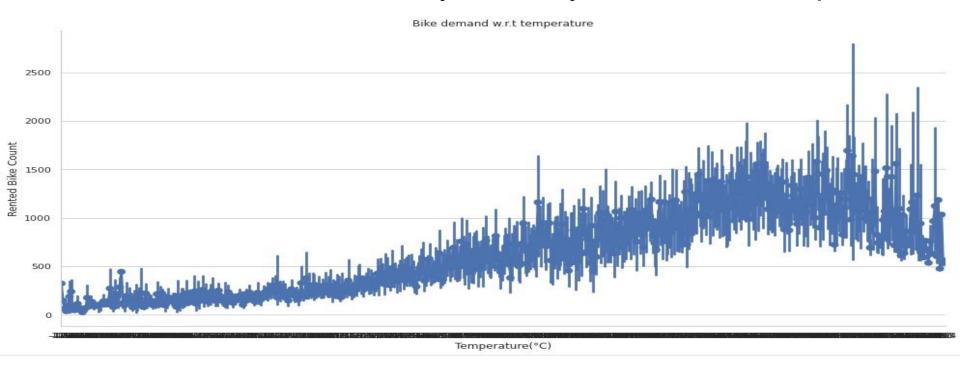

Let's see the total count of bikes w.r.t 'Season', 'Days of week', 'Holidays' -

Now we will see the Bike demand w.r.t 'Every hour in a day', 'Month', 'Season',' Temperature'-

As we can see here that some of the distribution are not normally distributed so we have applied some Log transformation here.

|                           | ented Bike Count | Temperature(°C) | Humidity(%) | Wind speed (m/s) | Visibility (10m) | temperature(°C) | Radiation (MJ/m2) | Rainfall(mm) | Snowfall (cm) | No Holiday |  |

#### **Test and Train Split**

```
# Independent variables
X = final_df.drop(['Rented Bike Count', 'Bike Count', 'Dew point temperature(°C)', 'Wind speed (m/s)', 'Solar Radiation (MJ/m2)', 'Visibility (10m)'], axis=1)
# Dependent Variable
y = final_df['Bike Count']

X_train, X_test, y_train, y_test = train_test_split(X,y,test_size=0.3,random_state=30)
C_n_line_or
```

#### Scaling

```
from sklearn.preprocessing import MinMaxScaler
scale = MinMaxScaler()
X_train = scale.fit_transform(X_train)
X_test = scale.fit_transform(X_test)
```

# Applying Machine Learning Models and Hypertuning

- 1. Linear Regression
- 2. Lasso regression
- 3. Decision Tree
- 4. Random Forest
- 5. XGBoost Algorithm

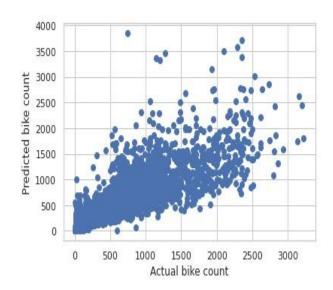

We will Hypertune our Models by using GridSearchCV.

### Comparison

#### 1. Linear Regression-

- R2 Score 0.6326705123041109
- Adjusted R2 Score 0.6253980729126162

#### 2. Lasso Regression-

- R2 Score 0.6319563058761604
- Adjusted R2 Score 0.6246697265282117

#### 3. Dicision Tree-

- R2 Score 0.7705060184265151
- Adjusted R2 Score 0.7659624652198972

#### 4. Random Forest-

- R2 Score 0.8590723534971378
- Adjusted R2 Score 0.8562822486944802

#### 5. XGBoost Algorithm-

- R2 Score 0.8776896212473072
- Adjusted R2 Score 0.875268103655542

### **Exploration Conclusion**

- 1. There are 2 rental patterns for Working days and Non-working days.
- 2. People generally prefer bikes at moderate to high temperature.
- 3. Demand of rental bikes is high between February to October.
- 4. Bike demand is high on clear day and lowest on Rainy or Snowy day.

After all the machine learning operation we are coming to the conclusion that Random Forest, XGBoost model performing well than the other models. So in future if we want to do the prediction we can use these models.

### Challenges

Elimination of features.

Finding best parameters for the model.
